Sweat Reduction

# Excessive Sweating Affects 365 Million People Globally

You are not alone - over 365 million people globally, or 1 in 20, suffer from excessive sweating or hyperhidrosis.<sup>1</sup>

Hyperhidrosis is an uncontrollable condition that can interfere with nearly every aspect of life. In people who have excessive sweating, the sweat glands are generally overactive, producing more sweat than is necessary. Excessive underarm sweat is the most bothersome and common form of excessive sweating.

**There is only one permanent, non-surgical treatment for excessive underarm sweat – miraDry.<sup>2</sup>**

## Safe. Effective. Permanent

The miraDry treatment is the only FDA-cleared treatment that can dramatically reduce underarm sweat by addressing the root cause of excessive sweat and its accompanying odor - not the symptoms.

Photo of an actual miraDry patient who took photos after a workout before and after their miraDry treatment. Results may vary.

**SkinSpeaks, Edina, MN**

**PERMANENT**

**IMMEDIATE**

**NON-SURGICAL**

**300,000+ treatments globally**

# What is miraDry?

The miraDry treatment is a procedure performed by a trained medical professional, in as little as one hour.<sup>3</sup>

The miraDry System uses thermal energy that targets and eliminates the sweat glands in your underarm. Once those glands are eliminated, they do not grow back. Goodbye, sweat stains!

## 3 Steps to Sweating Less

### Numb it

Local anesthesia is administered to assure maximum comfort during the treatment.

### Mark it

A temporary tattoo is used to mark skin in preparation for treatment.

### Treat it

The area is treated with miraDry, eliminating sweat and odor glands in the underarm.

# Aftercare Steps

Do's	Don'ts
Ice	Shave
Clean	Use Antiperspirant/Deodorant
Wear loose fitting tops	Exercise for a few days after treatment

Talk to your provider about detailed care instructions for best treatment results.

## Is miraDry Right For You?

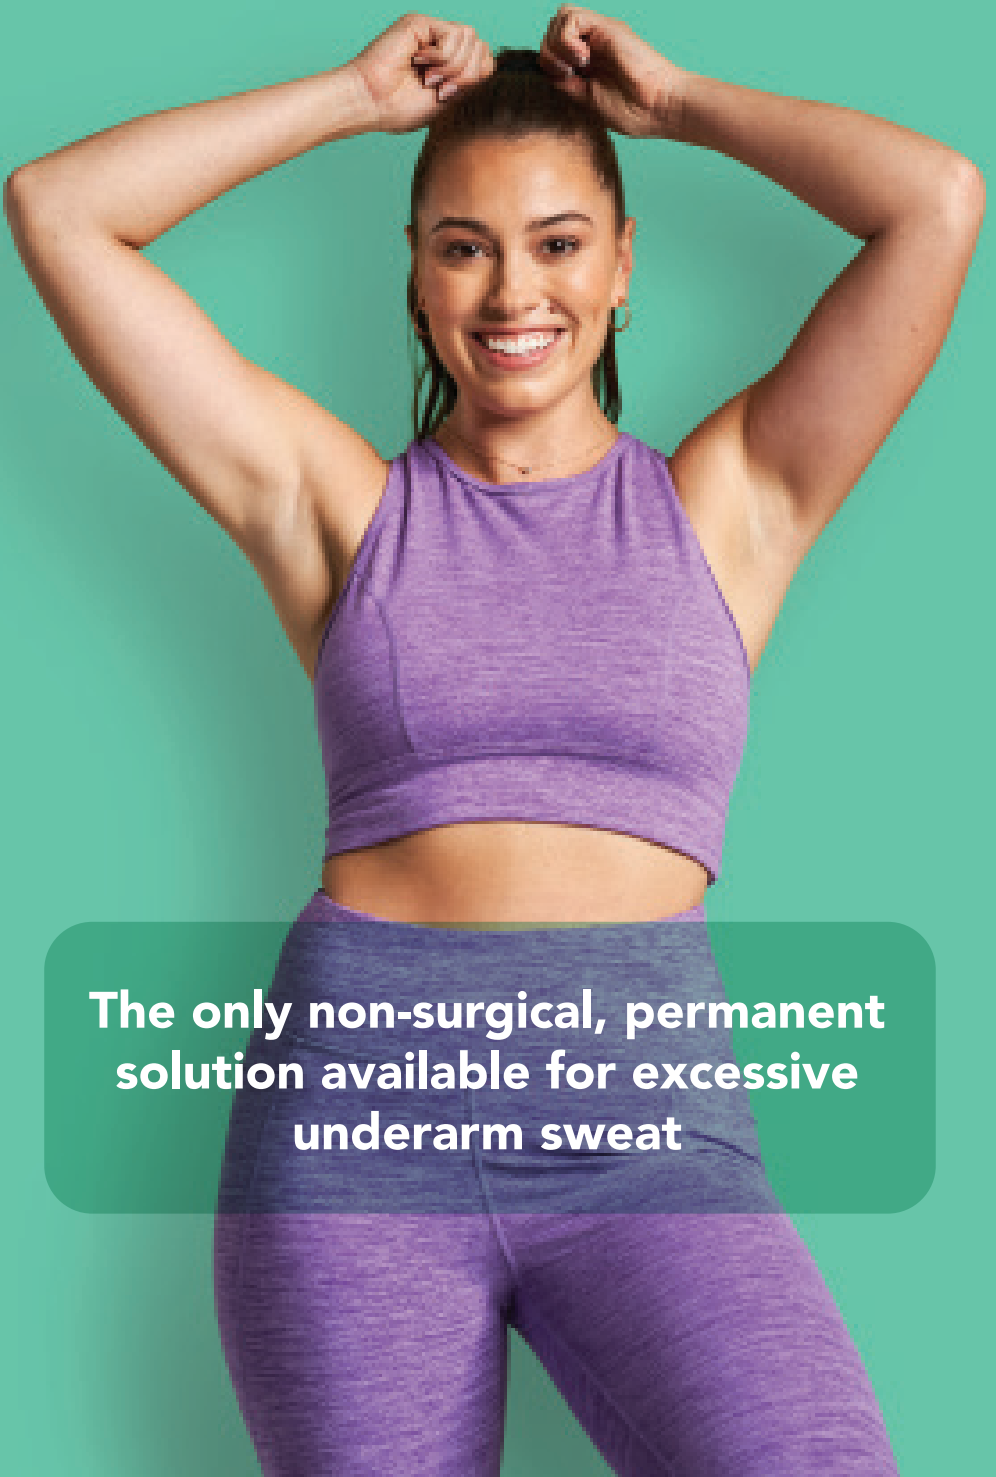

miraDry is the only permanent, immediate and non-surgical treatment on the market.

# Why Stress Over Underarm Sweat If You Don't Have to?

**miraDry is an FDA-Cleared safe and effective solution**

---

Have you ever felt self-conscious about your sweat?

---

Do you avoid social activities or work opportunities because you're worried about sweating in front of other people?

---

Have you ever wished underarm sweat was something you didn't have to worry about?

---

Have you ever tried any of the following to help minimize sweat?

- Clinical and/or prescription-strength deodorants
  - Sweat shields to protect your clothes
  - Only wearing clothes that hide sweat
  - Changing clothes multiple times per day
- 

Is your underarm sweat ever accompanied by an unpleasant odor?

---

Have you ever been self-conscious about your underarm odor?

---

**miraDry offers a safe, effective, and permanent solution to underarm sweat.**

**If you answered yes to one or more of these questions, miraDry may be right for you. Talk to your physician for more information.**

**Visit [miradry.com](https://miradry.com) for more information**

**\*In the European Union (EU), the miraDry System is intended for use by health care professionals for treatment of primary axillary hyperhidrosis (excessive underarm sweat) in adults.**

Long-term efficacy and quality of life assessment for treatment of axillary hyperhidrosis with a microwave device. *Dermatol Surg.* 2014;40(7):805-807.

The miraDry system is FDA-cleared for the treatment of primary axillary hyperhidrosis (excessive underarm sweat) and the permanent removal of underarm hair. It also may reduce underarm odor.

You should not have the miraDry treatment if you have a heart pacemaker or other electronic device implant, need supplemental oxygen or have known resistance to or history of intolerance to local anesthesia including lidocaine and epinephrine. The most common side effects include swelling, discomfort or pain, redness, bruising, bumps and altered sensation in the treated area. Some side effects may last a few days to a few weeks. Others can last from one to several months following treatment. Patient results and experience may vary.
